Abstract: The first record of *Adomerus maculipes* (Mulsant & Rey, 1852) (Heteroptera: Cydnidae) on the island of Tenerife (Canary Islands, Spain) is reported. The distribution of the species in the archipelago is summarised.

Key words: Heteroptera, Cydnidae, *Adomerus maculipes*, first record, distribution, Tenerife, Canary Islands, Spain.

Resumen: Nuevas citas de Heteroptera de las Islas Canarias (España), XX. Se presenta la primera cita de *Adomerus maculipes* (Mulsant & Rey, 1852) (Heteroptera: Cydnidae) en la isla de Tenerife (Islas Canarias, España). Se resume la presencia de la especie en el archipiélago.

Palabras clave: Heteroptera, Cydnidae, *Adomerus maculipes*, primera cita, distribución, Tenerife, Islas Canarias, España.

The first record of *Adomerus maculipes* (Mulsant & Rey, 1852) (Heteroptera: Cydnidae) for the Canary Islands (Spain) was reported, as *Canthophorus maculipes* (Mulsant & Rey, 1852), by ROCA-CUSACHS et al. (2020) from the island of La Palma, based on one specimen found in 1993 at Marcos y Cordero and has been the only record of the species reported from the archipelago, so far. *Canthophorus maculipes* was transferred to the genus *Adomerus* Mulsant & Rey, 1866 because of some characters shared with this genus (GAPON, 2018; AUKEMA et al., 2021).

Herein, the first record of *A. maculipes* on the island of Tenerife is reported: On 08-04-2025, an adult specimen (Fig. 1) was found in the Barranco del Pino, located in the northern part of the island (coordinates: 28.398406, -16.493319). A photograph of the specimen was uploaded to the online database iNaturalist (see [here](#)).

Acknowledgements

I like to thank Néstor Pulido Quintana for allowing me to use his photo of *A. maculipes* to illustrate this note.
